Crowd management at events

Definition:

Crowd control is a public security practice in which large crowds are dispersed to prevent stampedes, fights, brawls involving drunk or unruly individuals, or riots. Stampedes, in particular, can cause hundreds of deaths.[1] Effective crowd management concerns the management of both anticipated and unanticipated crowd events.[12] Crowd control can involve private security guards as well as police officers. Crowd control is often used at large public gatherings such as street fairs, music festivals, stadiums, and public demonstrations. At some events, security guards and police use metal detectors and sniffer dogs to prevent weapons and drugs from being brought onto the venue.

What are the basics of crowd management for organizing outstanding events?

To organize outstanding events, one must be familiar with all the basics of crowd management. A temporary gathering of a large group of people in the same place (usually in public spaces) at the same time for a specific purpose and performing the same behavior or action can turn the group into a crowd by taking a particular event, action, or reason to bring people together.

Crowd Management Essentials:

1. Signages Reliance:

Placing and prominently displaying signs is one of the most effective ways to communicate with attendees and convey information about the nature and location of the event. This method is one of the easiest ways to communicate general and security information, so signs should be placed in a suitable location,

2. Communicating with the Team

Having a clear communication plan between team members inside and outside the venue is essential to avoid difficulties in crowd management. Communication devices include wireless communication devices, which are the most reliable means of communication, and telephones and verbal messages, which are more suitable for smaller events and occasion

Crowd Management Essentials:

3. One Language of Communication:

Placing and prominently displaying signs is one of the most effective ways to communicate with attendees and convey information about the nature and location of the event. This method is one of the easiest ways to communicate general and security information, so signs should be placed in a suitable location.

4. Review and Address Weaknesses:

After the event concludes, it must be evaluated with the team. This stage should be treated with no less importance than the initial planning process. This should be done immediately after the event, as it is still fresh in everyone's minds. The successful methods should be assessed and improved, and a set of observations and lessons learned should be recorded for future events. In addition to evaluating the event with the team, feedback and opinions from attendees should also be gathered by sending questionnaires to attendees or listening to their comments and suggestions during the event. These observations can be used to improve future events and better meet the needs of attendees. In general, evaluation should be an essential part of the planning and organization process because it helps improve methods and better achieve the desired goals in the future.

Departments Related to Crowd Management :

1. Engineering Department

Employs engineering and electronic technologies, from design to operation, to facilitate crowd movement and prevent crowding and congestion from the outset

2. Administrative Department

Requires plans and human and non-human resources related to crowd management, including the management of crowds and their gathering. Key aspects include communication management, organization, coordination, and .operations management

3. Behavioral Department

Relate to the psychological, social, health, and cultural nature of the individuals and groups that make up the crowd, and provide solutions that .contribute to crowd management and control

Crowd Density:

Crowd is not measured by size but by the density.

Density = Number of people m²

Types of Crowd Density:

Static: When the crowd is standing still
(4 People m²)

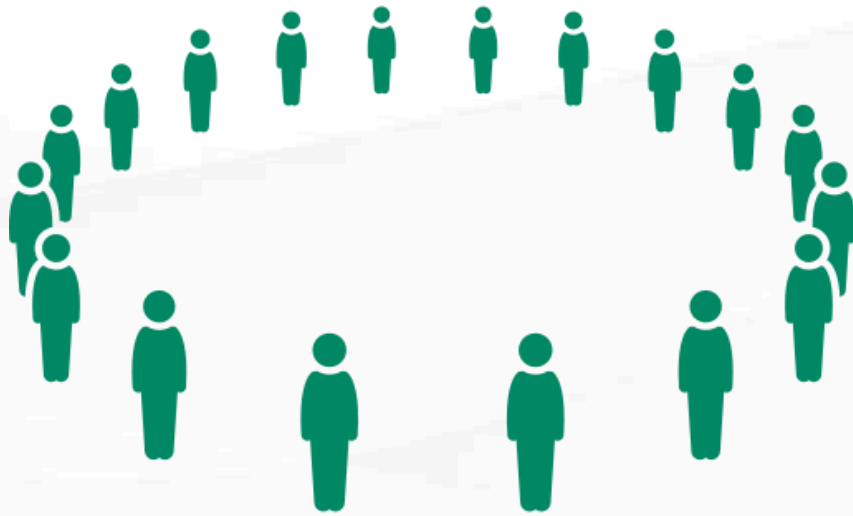

Dynamic: When the crowd is moving
(less than 4 People m²)

Crowd Control Methods:

1. Planning and Preparation
2. Crowd Control
3. Communication
4. Using Verbal Commands
5. Awareness of Potential Risks
6. Teamwork
7. Using Modern Technologies
8. Using Organizational Tools and Enablers in Crowd Management
9. Forecasting
